

**WHY DO YOU WANT TO APPLY FOR THIS VERTICAL? WHAT ARE YOUR EXPECTATIONS AND TARGETS YOU WANT TO ACHIEVE WHILE WORKING IN THE VERTICAL?**

**ANS.** I want to apply for this vertical as it has what I love a lot. Software application and some sort of development of it suitable for aerospace. I am also intending to pursue it at higher level also, and getting some first-hand experience by being a part of the team will be very valuable. I will be learning new things and will be learning to approach the subject in a more efficient way.

Avionics and recovery being a very important aspect of any rocket will have challenges of its own, and working as a part of team, and trying to deal with those challenges, will not only develop my problem-solving skills but will also help me with my team working skills.

This part has a lot of scope for further innovations and there is a lot of scope of development which will be really interesting and engaging to work with.

**Following will be my targets working in the team:**

- I would be looking forward to learn as much as I will be able to, whether at my own, or from my peers or seniors or mentors.
- I will try to do significant contributions in the team endeavors and try to add as much value as possible as I will be able to in the team.
- Project completion within time and its success, will be one of my primary goals, so that whatever plans and timeline decided won't be compromised.
