

WHY DO YOU WANT TO APPLY FOR THIS VERTICAL? WHAT ARE YOUR EXPECTATIONS AND TARGETS YOU WANT TO ACHIEVE WHILE WORKING IN THE VERTICAL?

ANS. I would like to be a part of the propulsion vertical as being the most important factor of any type of rocket, I will be learning a lot of stuff and will be putting it into use. Given that the team is planning to develop a hybrid engine of its own, I think being a part of such an endeavours thought won't be an easy task but will be really interesting, challenging and exciting to work upon.

This will include exploring new strategies testing, and deploying them. A lot of research from the side of the research vertical as well as from our side will be required. Our coordination will be crucial, and I think I will be really happy to do it.

FOLLOWING ARE THE TARGETS I AM AIMING AT:

- I would be looking forward to learn as much as I will be able to, whether at my own, or from my peers or seniors or mentors.
- I will try to do significant contributions in the team endeavours and try to add as much value as possible as I will be able to in the team.
- Project completion within time and its success, will be one of my primary goals, so that whatever plans and timeline decided won't be compromised.
